TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: DEIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE POF INVENTION: DEPERMINES FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/134,001C
CURRENT APPLICATION NUMBER: US 60/064,964
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-11-08
NUMBER OF SEQ ID NOS: 5674

NUMBER OF SEQ ID NOS: 5674

FENDAMENT: 1673
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TIGCAAAIGCIGIIAAAGIAAACACIIGGACCIAAAGGCCGIAAIGICGIIAIIGAAAAGI 127

-:- SUBCELLULAR LOCATION: Octoplasmic (By similarity).
-:- SIMILARITY: Belongs to the chaperonin (HSP60) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- FUNCTION: Prevents misfolding and promotes the refolding and proper assembly of unfolded polypeptides generated under stress conditions (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Salanoubat M., Genin S., Arriguenave F., Gouzy J., Mangenot S., Arlat M., Billault A., Brottier P., Camus J.C., Cattolico L., Chandler M., Choisne N., Claudel-Fenard C., Cunnac S., Demange N.                                                                                                                                             J. Biosci. Bioeng. 94:140-147(2002).
-!- FUNCTION: Prevents misfolding and promotes the refolding and proper assembly of unfolded polypeptides generated under stress
                                                                                                                                                                                                                                         conditions (By similarity).
SUBUNIT: Oligomer of 14 subunits composed of two stacked rings 7 subunits (By similarity).

Submitted (JUL-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Prevents misfolding and promotes the refolding and proper assembly of unfolded polypeptides generated under stress conditions (By similarity).

-!- SUBBUIT: Oligomer of 14 subunits composed of two stacked rings of 7 subunits (By similarity).

-!- SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).

-!- SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Betaproteobacteria; Burkholderiales;
